Linking IP with telephony

KUALA LUMPUR: Mynic Bhd has teamed up with Dutch company AG Projects to research telephone number mapping in Malaysia.

The collaboration involves knowledge sharing and technology transfer on the research.

Telephone number mapping enables connecting the Internet Protocol (IP) world to the telephone system in a seamless manner. It is a protocol that provides a translation mechanism for telephone numbers into IP addressing schemes.

Mynic is a provider of Internet registry and addressing services in the Asia Pacific. It is an agency under the Ministry of Science, Technology and Innovation and is regulated by the Malaysian Communications and Multimedia Commission.
